01 · OVERVIEW

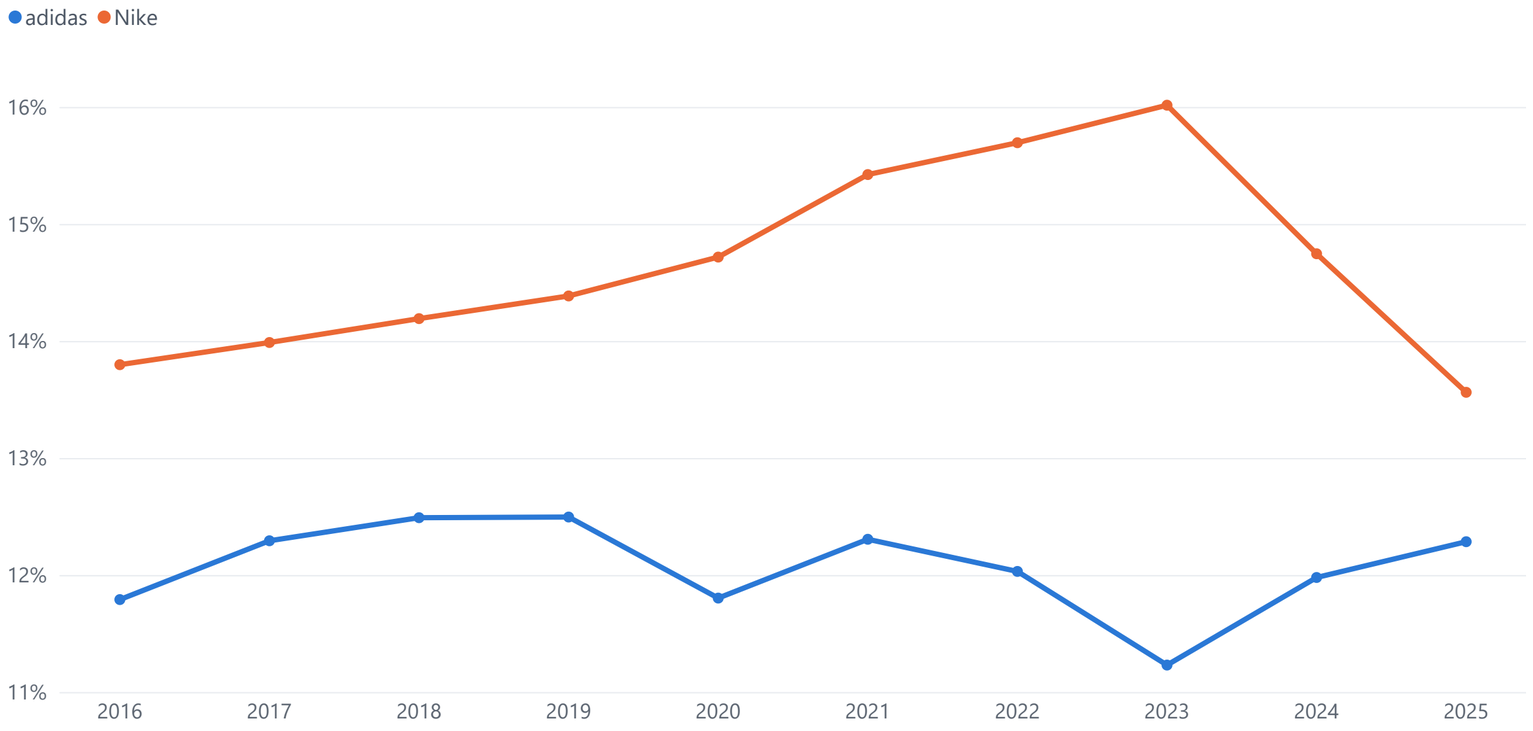

adidas has nearly closed the gap with Nike, in a market that hasn’t grown in real terms

Nike’s lead in Western Europe narrowed from 4.8 to 1.3 points in two years; after inflation, the market is no bigger than in 2019.

adidas vs Nike share gap, 2025 (pts)	adidas share, 2025	Markets adidas leads	Bought online, 2025	Real growth p.a., 2019–25
-1.3	12.3%	11 of 16	31.6%	0.0%

adidas vs Nike: share of sportswear sales (%)

Western Europe excl. Türkiye · 2016–2025

WHAT ADIDAS SHOULD DO

Three moves, sized with the data

1 Win the UK

Western Europe’s largest sportswear market (€12.7bn), and where Nike’s lead is widest: 6.2 pts. Each share point is worth about €127m in retail sales.

2 Take running from On and Hoka

Terrace-shoe searches are past their 2024–25 peak, while On, Hoka and Adizero searches are up this year in all 7 markets. Running shoes are forecast to outgrow footwear overall (+3.7% vs +2.9% a year to 2030). Scale Adizero.

3 Grow Germany through online

adidas’s home market has shrunk 2.2% a year in real terms since 2019, and Euromonitor expects only +0.5% a year to 2030. 46% is bought online: grow through e-commerce and share gains.

Next step: validate each move with internal POS, consumer-panel and sell-in data before committing budget.

Sources: Euromonitor International, Passport (2026); Statista Market Insights; Google Trends; adidas, Nike and Puma quarterly reports. “Western Europe” excludes Türkiye (inflation distorts its euro values).

02 · MARKET SHARE

adidas now leads Nike in 11 of 16 European markets

Nike's Western European lead fell from 4.8 to 1.3 pts in two years; it still leads in the UK, Spain, Hungary, Norway and Portugal.

03 · SALES MOMENTUM

adidas is the only one of the three growing in Europe

adidas Europe has grown for 10 straight quarters (currency-neutral), while Nike EMEA and Puma EMEA are shrinking.

adidas: sell-in vs sell-out growth (%)

Reported Europe sales vs Euromonitor retail value

Reading the gap

In 2024 adidas sold into retailers (+19.8%) far faster than consumers bought (+9.5%), consistent with restocking after 2023. In 2025 the gap narrowed to about 2 points (+7.7% vs +5.5%).

Source: company quarterly reports (adidas Europe; Nike EMEA in calendar quarters; Puma EMEA). Sell-out = Euromonitor adidas retail value, Western Europe excl. Türkiye. Scopes differ: compare growth, not levels.

04 · CONSUMER DEMAND

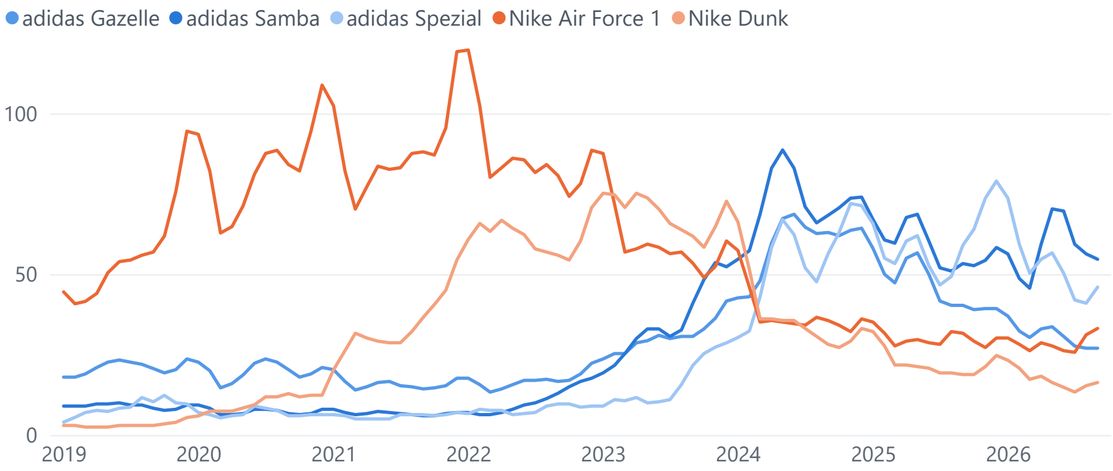

The terrace-shoe peak is behind us; running is the next battleground

Samba and Gazelle searches are past their 2024–25 peaks; On, Hoka and Adizero searches are up on last year in all 7 markets (Jan–Sep).

Country: United Kingdom

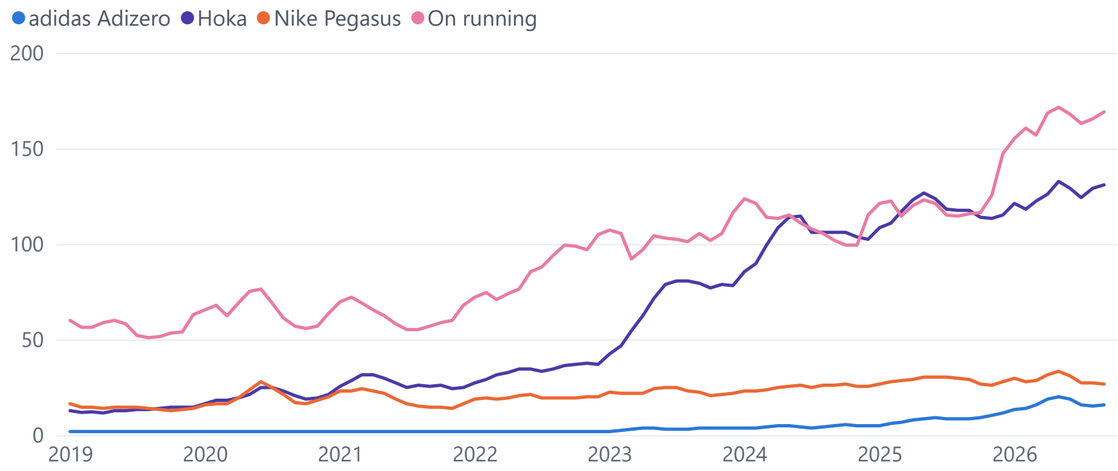

Lifestyle franchises: Google search interest

United Kingdom · 3-month average; 100 = Samba's peak month

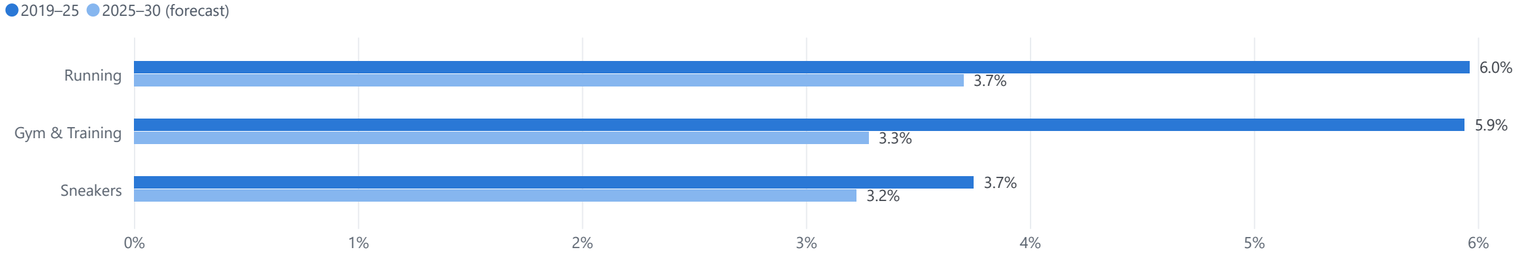

Running: Google search interest

United Kingdom · 3-month average; 100 = Samba's peak month

Footwear sales growth per year, by type (%)

Statista region: Europe · revenue growth per year

Statista region (footwear chart): Europe

How to read this page

Search index = Google Trends interest rescaled so that 100 = adidas Samba's peak month in the selected country, shown as 3-month averages. Compare terms within a country, not across countries. Statista converts revenue at each year's average exchange rate.

Sources: Google Trends (monthly search interest, Jan 2019–Sep 2026); Statista Market Insights (footwear revenue 2018–2031), 2026.

Online stayed high after COVID; Germany is the most online market

Online's share of Western European sportswear jumped from 21% in 2019 to 31% in 2020 and has stayed at 29–32% since.

Country / region: Western Europe excl. Türkiye

06 · OUTLOOK

The market hasn’t grown in real terms since 2019

Nominal growth of 3.3% a year was all price. Real growth came from Romania, France and the Netherlands; Poland leads the forecast.

How the analysis was built

Four sources, cleaned and validated in Python, modelled in Power BI. Licensed data is used under Audencia's academic licence.

Sources

Euromonitor International, Passport
Market size (nominal and constant 2025 prices, 2011–2030 incl. forecast), brand and company shares (2016–2025) and retail channels for 12 Western European countries plus Poland, Czech Republic, Hungary and Romania.

Statista Market Insights
Footwear (Sneakers, Running, Gym & Training) and Sports & Swimwear apparel: revenue, volume, price and online share. Europe and 7 countries, 2018–2031.

Google Trends
Monthly search interest for 18 franchise and brand terms in 7 countries, Jan 2019–Sep 2026.

Company reports
adidas (Europe), Nike (EMEA) and Puma (EMEA) quarterly results, Q1 2019 to the latest quarter (mid-2026).

Tools
Python (pandas) for cleaning and checks; Power BI Desktop for the star-schema model, DAX measures and report.

Preparation and validation

1 Türkiye removed, also from the Western Europe totals: inflation made its euro values grow 21× (2016–25) at fixed exchange rates.

2 Nested channels: only lowest-level channels are summed, so shares add up to 100%.

3 19 brands kept as one series across owner changes or renames (e.g. Puma, Reebok, Champion).

4 "–" means not ranked for brands (dropped) but no sales for channels (0).

5 Constant-price market sizes added: market growth claims use real figures.

6 Google Trends rescaled to one index per country via an "adidas Samba" anchor.

7 Company growth is currency-neutral vs the prior-year quarter.

Automated checks
Shares sum to 100% (±1.5 pts) for every country and year; no duplicate keys.

Limitations

Sell-out vs sell-in
Euromonitor and Statista estimate consumer spending, not company revenue: compared on growth only.

Different scopes
adidas "Europe", Nike and Puma "EMEA" and Euromonitor "Western Europe" differ.

Attention is not purchase
Search interest shows where attention moves, not what is bought.

Thin spots
Netherlands brand data is 70% "Others"; Puma's Austria series breaks in 2018 (reclassification).

Licensing
Euromonitor and Statista data are used under Audencia's academic licence and not redistributed.

Next step with internal data
POS, consumer-panel and sell-in data by account would validate each finding.

FROM RAW EXPORTS TO THIS REPORT

Raw exports → Python cleaning (5 scripts) → 12 tidy tables → Power BI star schema (46 DAX measures) → 7-page report

Inputs: Passport exports, Statista workbooks, Google Trends series and adidas, Nike and Puma quarterly documents. Every step is scripted, so the report can be rebuilt when new data arrives.
